

5 Tough Topics

Teachers Explore on our Programs

1

Overcoming Obstacles

Everyone has challenges and hurdles. Not everyone approaches them the same way. Our programs bring lessons to life about perseverance and commitment.

2

Showing Kindness

Students who share extended periods of time together find interests in common with classmates and get to share experiences with one another.

Students also see countless examples of acts of kindness, empathy, and goodwill.

Small gestures add up.

Students discover role models and develop values.

3

Practicing Making Good Decisions

In order to be ready to make the big decisions under pressure, students have to have opportunities to practice making decisions when less is at stake.

4

Learning Beyond Content Areas

Most schools have mission statements and graduate profiles that include concepts that are not part of a traditional class. Leadership, selflessness, discipline, honesty, teamwork, and communication are woven into participation in our programs.

5

Opening Minds

In many cases, students are exposed to limited points of view and may have sheltered experiences. Simply seeing something new can inspire open-mindedness.
